

The information provided in the report below is based on information gathered from police reports, not calls to location (called "Calls for Service"). This means the data comes from actual police reports made with the Shawnee Police Department. While considered reliable and accurate, the data does not come from the police department's official database. Rather, it comes from the crime analysis unit who commonly re-classifies information for analysis purposes, rather than official purposes. For example, in a domestic situation where the ex-spouse breaks in to his/her former home and steals photographs of the couple's children, the official records would reflect the incident as a "burglary." However, for analysis purposes, it is analyzed as a domestic situation and therefore would not be included in the data provided below under "burglary." No domestic reports are included in the map.

The information that is provided below includes information on: robbery (stealing from a person or business with the threat of violence if the victim does not comply), commercial burglary (breaking into a business after hours with the intent to steal items from within), residential burglary (breaking into a home with the intent to steal items from within - most often when no one is home).

NOTE: entering an open garage and stealing items from the garage, whether or not the residents are home, is considered a residential burglary), auto theft (stealing a vehicle), auto burglary (stealing items from a vehicle, whether or not it was locked) and vandalism (damaging public or private property) are included on this map. NOTE: Stranger murder and stranger rape are not included because they are virtually non-existent in Shawnee. Percentages are based upon 100 units per boundary.
